

Proposal for Xendit Payment Gateway Integration

Agent Commission Management System

Executive Summary

This proposal recommends integrating Xendit as the official payment gateway for the Agent Commission Management System. The integration covers Agent Account Reactivation Payments and Agent Commission Withdrawals (Disbursements) to automate payment collection and payouts.

Current Challenges

Manual payment verification, delayed account reactivation, manual withdrawal processing, higher administrative workload, risk of human error, and limited transaction tracking.

Proposed Solution

Use Xendit Invoice API for agent reactivation payments and Xendit Disbursement API for commission withdrawals. Xendit webhooks will automatically update transaction statuses in the system.

Reactivation Payment Flow

1. Agent submits request. 2. Admin approves. 3. System creates Xendit Invoice. 4. Agent pays via hosted payment page. 5. Webhook confirms payment. 6. System automatically reactivates the account and notifies the agent.

Commission Withdrawal Flow

1. Agent requests withdrawal. 2. System validates balance. 3. Admin approves. 4. System creates Xendit Disbursement. 5. Xendit transfers funds. 6. Webhook confirms completion. 7. System updates records and notifies the agent.

Required Xendit Services

Invoice API, Disbursement API, and Webhooks.

Company Requirements

Business registration documents (SEC/DTI, BIR), corporate bank account, authorized representative IDs, business information, and website or application for verification.

Benefits

Automated payments, faster processing, secure PCI-compliant payment handling, complete audit trail, improved reconciliation, scalability, and better experience for agents.

Estimated Fees

Typical published pricing includes approximately 2.3% for GCash, 1.8% for Maya, 1.4% for QR PH, around 3.2% plus a fixed fee for cards, and separate pricing for disbursements. Actual rates depend on the commercial agreement with Xendit.

Conclusion

Integrating Xendit will modernize the company's payment infrastructure, reduce manual work, improve accuracy, enhance transparency, and support future growth.
